

“I’d like to check on how my school is doing against standards more often.”

How about every day?

Insight assessment platform gives principals an easy way to monitor student achievement at any time. You can:

- Access progress reports that show how your school is doing all year long...by school, class or student...and create a track record that monitors performance straight through high-stakes testing periods.
- Have your teachers create tests or assessments aligned to specific standards or sub-standards in minutes from a point-and-click environment.
- Have students and teachers access relevant resources within seconds of assessing needs – providing targeted intervention for the entire class or by individual student. Take advantage of anytime/anywhere access using the browser-based platform.
- Deliver assessments using a host of different methods...from direct to your interactive whiteboard with student response systems (clickers), to traditional pencil and paper formats.

Don't rely on benchmark test taken once or twice a year. Get a snapshot on how your school is doing against specific standards in minutes...and anytime you choose.

PRINCIPALS:

Three Insight Views — One Goal

ADMINISTRATION LOGIN: Get a snapshot of how all classes and students are doing at any time.

TEACHER LOGIN: Build Aligned Tests...deliver them instantly...see results on the fly.

STUDENT LOGIN: Students have the opportunity to review results and work independently on standards that need attention.

Assess. Monitor. React.

Giving Teachers More Power to Perform

- 1 Create an assessment aligned to your state's standards in minutes. Make test available online, on paper, on your interactive whiteboard...or use a combination.

- 2 Your test is corrected as you watch. Get immediate feedback of underperforming areas of the standards you've tested against.

- 3 With achievement gaps identified, you can access aligned resources directly from your reports. Begin remediation within seconds with the click of a mouse.

Key Benefits

- Assessment and intervention planning become a part of a teacher's daily activities...not a programmed event.
- Creates opportunities for ongoing remediation and differentiated instruction.
- Provides a documented track record of progress all through the school year.
- Easily groups students for academic improvement plans to closely monitor those at risk.
- Browser-based platform provides anytime-anywhere access. All data saved to a central repository...not individual hard drives.

Instantly turn any set of "Clickers" into a powerful tool for monitoring student progress!

LearningStation supports these and other student response systems with real-time connection.

Promethean ActiveExpressions | Smart Student Response | eInstruction CPS | Scantron

Make tests available online, on paper, on interactive white boards — or a combination.
